INDEX

Page

Acidity, nutrient solutions, effect on growth of *Lemna minor* 428
Acids, use in preparation of legume silages 342, 343
Alfalfa, nitrogen-fixation experiments in Kansas 359–369
ALLARD, H. A., and EVANS, MORGAN W.: Growth and Flowering of Some Tame and Wild Grasses in Response to Different Photoperiods 193–228
Aluminum, ineffectiveness in growth stimulation of *Phymatotrichum omnivorum*, tests 133, 154–158
Anthracnose of tulip. C. M. Tompkins and H. N. Hansen 61–64
Aphid—
  resistance in peas, influence upon aphid development, reproduction, and longevity. C. D. Harrington 461–466
  transmission of cucumber mosaic viruses to pea and bean, experiments 41
Apple blossoms, nectar concentration—
  at time of bee's visit, relation to transmission 749–751
  growth and survival of fire blight bacteria in 734–735
  measurements under natural conditions 736–737
  relation to—
    blossom infection 738–740
    growth of *Erwinia amylovora* and fire blight infection. S. S. Ivanoff and G. W. Keitt 733–743
    transmission of fire blight by bees. G. W. Keitt and S. S. Ivanoff 745–753
Army worm, southern, glycogen content—
  determination 518–519
  normal variation 519–520, 522–524

Arrowgrass, preservation for chemical analysis by mercuric chloride, experiments 494–507
Aspergillus niger, cause of radicle decay of conifers 92–94
AUBEL, C. E., HUGHES, J. S., and PETERSON, W. J.: Calcium Requirements of Growing Pigs 531–542

BABB, M. F., KRAUS, JAMES E., WADE, B. L., and ZAUMEYER, W. J.: Drought Tolerance in Snap Beans 543–553
BABERS, FRANK H.: Glycogen in *Prodenia eridania*, With Special Reference to the Ingestion of Glucose 509–530
BANFIELD, W. M.: Distribution by the Sap Stream of Spores of Three Fungi That Induce Vascular Wilt Diseases of Elm 637–681
Bark beetles—
  association with blue-stain fungus and yeasts 589–600
  infection of elms with vascular wilt diseases 674–675
Bean—
  cucumber mosaic virus strains pathogenic on. O. C. Whipple and J. C. Walker 27–60
  inoculation with cucumber mosaic viruses, results 28–32
  leaflets—
    diseased and healthy, photosynthesis and respiration rates, comparison. G. K. Parris 179–192
    diseased, apparent photosynthesis 184–186, 187–189
    diseased, respiration 186–187, 189
    mildewed and healthy, apparent photosynthesis 182–183, 184–186, 187–190

Bean—Continued. Page
  resistance to cucumber mosaic virus 42
  rust—
    epidemics, discussion 729–730
    geographic distribution 717–718
    infection, grades and types, description 721–722
    infection, rating 721
    organism—
      new races, orgin, discussion 729
      physiologic races, differentiation, studies 717–731
      physiologic races, geographical distribution 726–727, 728
      physiologic races, identification 722–724
  snap—
    drought tolerance. M. F. Babb, James E. Kraus, B. L. Wade, and W. J. Zaumeyer 543–553
    hypocotyl affected with black root, histology 686
    plants, sudden wilting, cause, discussion 688–689
    pod affected with black root, histology 687
    pod size, effect of drought 547–552
    root infected with black root, histology 684–686
    seed, transmission of black root, histology 686
    stem affected with black root, histology 686–687
    tissues affected with black root, histological study. Wilbert A. Jenkins 683–690
    yield, effect of drought 544–547
  U. S. No. 1 Refugee, drought tolerance 543–553
  Uromyces phaseoli typica on, physiologic races, differentiation. L. L. Harter and W. J. Zaumeyer 717–731
  varieties—
    reaction to physiologic races of bean rust organism 724–726, 729–730
    resistant to rust, development possibilities 730
Bees—
  attraction to blossoms, length of time after inoculation with fire blight organism 749
  transmission of fire blight, and its relation to nectar concentration of apple and pear blossoms. G. W. Keitt and S. S. Ivanoff 745–753
BELL, T. DONALD, CASIDA, L. E., BOHSTEDT, G., and DARLOW, A. E.: Production of Heat and Ovulation in the Anestrous Ewe 619–625
Bent, creeping, growth and flowering, effect of day-length conditions 195, 196, 197–199, 219–220
Berries, food value for wildlife in Pennsylvania 632, 633
Black root of snap bean, histological study of tissues. Wilbert A. Jenkins 683–690
BLANK, LESTER M.: Response of *Phymatotrichum omnivorum* to Certain Trace Elements 129–159
BLISH, M. J., and KNEEN, ERIC: Carbohydrate Metabolism and Winter Hardiness of Wheat 1–26
Blood, pigs, calcium requirements 532–540
Blossom-blight infection of apple and pear, relation to nectar concentration, experiments 733–742, 745–752
Blue stain fungus, *Ceratostomella montium* n. sp., and some yeasts associated with two species of *Dendroctonus*. Caroline T. Rumbold 589–601
Bluegrass—
  bulbous, growth and flowering, effect of day-length conditions 195, 197–199, 218–219

Page

Bluegrass—Continued.
Canada, growth and flowering, effect of day-length conditions 195, 197–199
Kentucky, growth and flowering, effect of day-length conditions 195–196, 197–199, 201–203
BOHSTEDT, G.:
BELL, T. DONALD, CASIDA, L. E., and DARLOW, A. E.: Production of Heat and Ovulation in the Anestrous Ewe 619–625
JOHNSON, B. CONNOR, PETERSON, W. H., and HEGSTED, D. MARK: A Study of Various Methods of Preserving Legume and Other Forages by Ensiling 337–348
Bone formation, pigs, calcium requirements 532–538
Borax, application to soil, efficacy in control of boron deficiency of crucifers 583–585
Boron—
deficiency—
control by soil treatment 583–585
disease in cabbage. J. C. Walker, John G. McLean, and James P. Jolivette 573–587
symptoms, susceptibility, and control in *Brassica oleracea* and subspecies 574, 575–585
ineffectiveness in growth stimulation of *Phymatotrichum omnivorum*, tests 133, 154–158
Botrytis sp., cause of radicle decay of conifers, experiments 91–94
Bottlebrush, growth and flowering, effect of day-length conditions 195, 196, 197–199, 223
Brassica—
oleracea, subspecies, relative susceptibility to boron deficiency 580
spp., susceptibility to ring necrosis, list 476
BRIERLEY, PHILIP: Effect of Cool Storage of Easter Lily Bulbs on Subsequent Forcing Performance 317–335
BRIESE, REINHOLD R., and COUCH, JAMES F.: Mercuric Chloride as a Preservative of Cyanogenetic Plants for Chemical Analysis 493–507
Broccoli, sprouting, boron deficiency disease, study 574–580
Bromegrass, smooth, growth and flowering, effect of day-length conditions 195, 196–199, 207–209
Browse, food of wildlife in Pennsylvania, chemical composition 627–635
BRUCE, H. D.: Theoretical Analysis of Smoke-Column Visibility 161–178
Buckeye rot of tomato in California. C. M. Tompkins and C. M. Tucker 467–474

Cabbage—
boron deficiency—
control through soil treatment 583–585
disease. J. C. Walker, John G. McLean, and James P. Jolivette 573–587
symptoms 575–580
ring necrosis—
R. H. Larson and J. C. Walker 475–491
symptoms and host range 475–489
virus—
properties, studies 489–490
susceptibility of cruciferous hosts to, studies 475–482
susceptibility of noncruciferous hosts to, studies 483–489
transmission, experiments 489
Cadmium, ineffectiveness in growth stimulation of *Phymatotrichum omnivorum*, tests 133, 154–158
Calcium—
carbonate purification of nutrient solutions, applicability to green plants 424, 426, 428
requirements of growing pigs. C. E. Aubel, J. S. Hughes, and W. J. Peterson 531–542
California—
buckeye rot of tomato in. C. M. Tompkins and C. M. Tucker 467–474
rice varieties, sterility and aberrant chromosome numbers 381–396
Canary grass, reed, growth and flowering, effect of day-length conditions 195, 196–199, 207
Carbohydrate metabolism—
in insects, review of literature 509–518
of wheat, and winter hardiness. Eric Kneen and M. J. Blish 1–26
Carbohydrates, utilization by insects 516–518

Page

CASIDA, L. E., BELL, T. DONALD, BOHSTEDT, G., and DARLOW, A. E.: Production of Heat and Ovulation in the Anestrous Ewe 619–625
Cauliflower, boron deficiency disease study 575–580, 583–585
Ceratostomella—
ips, comparison with *C. montium* n. sp 599
montium n. sp.—
blue stain fungus, and some yeasts associated with two species of *Dendroctonus*. Caroline T. Rumbold 589–601
morphology, cultural study 592–596
natural habitat and appearance of stain 591–592
technical description and diagnosis 597
temperature relations in culture 596–597
ulmi—
infection of elms by bark beetles 674–675
spores, distribution by sap stream of elm 637–679
Cherries—
mottle leaf, virus disease. E. L. Reeves 555–572
varietal susceptibility to mottle leaf 559–565, 569–570
virus disease, mottle leaf. E. L. Reeves 555–572
Cherry—
buds, hot-water treatment for control of mottle leaf, experiments 566, 569–570
leaf malformations, confusion with mottle leaf 566–569
mottle leaf—
confusion with other leaf malformations 566–569, 570
control by hot-water treatments, experiments 566, 569–570
control recommendations 570
spread in field 565, 570
symptoms 556–599, 569–570
trees, growth and fruit, effect of mottle leaf 559, 569–570
wild, preservation for chemical analysis by mercuric chloride, experiments 494–507
Chickens—
body—
conformation, relation to edible flesh 440–441
form, influence of relative changes in body depth 438
growth, general, study 435–436
flesh, edible, relation to body conformation 440–441
growing, body form. R. George Jaap 431–443
keel length, relative, changes in 438–439
shank—
and body, relative growth 436–438
length, cessation of growth 434–435
shape differences between breeds and crosses, heritable 439–440
Chromosome, aberrant, numbers and sterility in Caloro and other varieties of rice. Jenkin W. Jones and A. E. Longley 381–399
Chromosomes—
of plants, effect of X-ray irradiation 616–617
teosinte, knob positions on. A. E. Longley 401–413
Citrus red mite—
adult life span, length and effect of temperature 69–70, 71–72
egg to adult development, effect of temperature and season 67–69
incubation period, effect of temperature and season 67
influence of temperature and season on L. L. English and G. F. Turnipseed 65–77
oviposition, relation to adult life span 73
population, seasonal variation 73–76
total life span, differences between sexes 72
CLAGETT, CARL O., and TOTTINGHAM, W. E.: The Reducing-Substance and Phenolic-Compound Content of the Potato Tuber in Relation to Discoloration After Cooking 349–358
Cobalt, ineffectiveness in growth stimulation of *Phymatotrichum omnivorum*, tests 133, 154–158
Cold storage, onions, effect on pungency 377–378
Collard, boron deficiency disease, study 574–580
Colletotrichum lindemuthianum, infection of bean leaflets, physiological effects 183–187

Page

Compost, preparation for mushroom growing, studies. Edmund B. Lambert 415-422
Conifer seeds—
fungi isolated from 89-91
inoculation with fungi causing germination reduction and radicle decay 91-94
Conifers, germination reduction and radicle decay caused by certain fungi. Paul Lewis Fisher 87-95
Connecticut, *Cyclocephala* (*Ochrosidia*) *borealis* in. J. Peter Johnson 79-86
Cooking discoloration, potato tuber, relation to reducing-substance and phenolic compound content. Carl O. Claggett and W. E. Tottingham 349-358
Copper, effect on growth of *Phymatotrichum omnivorum*, experiments 131-158
Corn seed, X-ray irradiation, effect of temperature upon sensitivity 603-618
Cotton—
American upland, five varieties, distribution and relation of fiber population, length, breaking load, weight, diameter, and percentage of thin-walled fibers on seed. Jerry H. Moore 255-302
fiber—
breaking load on seed, studies 255-302
characters—
on seed of five varieties of American upland cotton, studies 255-302
simple and partial correlations for five varieties 295-297
variance within varieties 259-285
diameter on seed, studies 255-302
length on seed, studies 255-302
population on seed, studies 255-302
thin-walled, percentage on seed, studies 255-302
weight on seed, studies 255-302
root rot organism, response to trace elements, experiments 129-158
varieties—
fiber population, comparison by single regions 291-293, 297-298
simple and partial fiber-character correlations 295-297
simple fiber-character correlations within 293-295
variance of fiber characters—
analysis 285-290
within 259-285
Cottonseed in five varieties of American upland cotton, distribution and relation of fiber population, length, breaking load, weight, diameter, and percentage of thin-walled fibers on. Jerry H. Moore 255-302
COUCH, JAMES F., and BRIESE, REINHOLD R.: Mercuric Chloride as a Preservative of Cyanogenetic Plants for Chemical Analysis 493-507
Crucifers—
boron deficiency disease symptoms, susceptibility, and control 575-585
susceptibility to cabbage ring necrosis 475-482
Cucumber mosiac—
virus—
host range 42-45, 55-57
specific immunity to in zinnia 47-54, 56, 57
strains pathogenic on bean and pea. O. C. Whipple and J. C. Walker 27-60
14, substrains, isolations 37-39
viruses—
properties 40-41
separation from one another 54-57
transmission to pea and bean, experiments 42
Cull, following fire, prediction in Appalachian oaks. George H. Hepting 109-120
Cyanogenesis, in plants, rate increase in presence of mercuric chloride 503-504
Cyanogenetic plants, preservation with mercuric chloride for chemical analysis. Reinhold R. Briese and James F. Couch 493-507
Cyclocephala borealis—
control recommendations 85
damage and range 79
description and life history 80-85
in Connecticut. J. Peter Johnson 79-86
systematic position 80

Page

Cytology of oat smuts, further studies. C. S. Holton 229-240

DARLOW, A. E., BELL, T. DONALD, CASIDA, L. E., and BOHSTEDT, G.: Production of Heat and Ovulation in the Anestrous Ewe 619-625
Day length, factor in relation to growth and flowering of tame and wild grasses, studies 193-227
Dendroctonus—
monticolae, yeasts associated with, and a blue stain fungus, *Ceratostomella montium*, n. sp 589-600
ponderosae—
range, hosts, and damage to pine 589
yeasts associated with, and a blue stain fungus, *Ceratostomella montium*, n. sp 589-600
two species, some yeasts and a blue stain fungus, *Ceratostomella montium*, n. sp., associated with. Caroline T. Rumbold 589-601
DIACHUN, STEPHEN, and VALLEAU, W. D.: Virus Distribution in Mosaic-Resistant Tobacco and Its Relation to Pattern Development in Susceptible Varieties 241-247
Virus Distribution in the Leaves of Mosaic-Susceptible Tobacco Plants Inoculated at Topping Time 249-254
Diet of swine, relation to—
development of locomotor incoordination resulting from nerve degeneration. N. R. Ellis and L. L. Madsen 303-316
locomotor incoordination, studies 303-314
Discoloration, after cooking, of the potato tuber, relation to reducing-substance and phenolic-compound content. Carl O. Clagett and W. E. Tottingham 349-358
Dothiorella ulmi, spores, distribution by sap stream of elm 637-645, 658-659, 672, 677
Dropseed grasses (*Sporobolus* spp.), germination, factors affecting. Vivian Kearns Toole 691-715
Drought tolerance in snap beans. M. F. Babb, James E. Kraus, B. L. Wade, and W. J. Zaumeyer 543-553

ELLIS, N. R., and MADSEN, L. L.: Relation of Diet of Swine to Development of Locomotor Incoordination Resulting From Nerve Degeneration 303-316
Elms—
affected by Dutch elm disease, sap displaced from, *Ceratostomella ulmi* spores in 669-670
distribution of—
Ceratostomella ulmi from inoculation points 675
dyes injected at various seasons 670-672
highly colored suspensoids and stained yeast cells, rate 672
spores of three fungi—
injected into top 659-667
injected stump high 645-659
relation to vessel length 673
role of sap stream 674
spores, tracing methods 643-645
infection with *Ceratostomella ulmi* by bark beetles 674-675
tracheal system, extensive rapid fungus invasion, relation to drifting spores 672-673
vascular—
invasion, variability in extent following inoculation with fungi 675-676
wilt diseases, three fungi inducing, distribution of spores by sap stream. W. M. Banfield 637-681
Endocrine injections, effect on heat and ovulation in ewes, experiments 620-625
ENGLISH, L. L., and TURNIPSEED, G. F.: The Influence of Temperature and Season on the Citrus Red Mite (*Paratetranychus citri*) 65-77
Ensiling legumes and other forages, various methods, study. B. Connor Johnson, W. H. Peterson, D. Mark Hegsted, and G. Bohstedt 337-348
Environment, effect on pungency of onions 374-378

discoloration after cooking, determination by plug methods 354-357
tuber—
reducing-substance and phenolic-compound content, relation to discoloration after cooking. Carl O. Clagett and W. E. Tottingham 349-358
tissue, total reducing capacity 350-353
Potatoes, catechol equivalent, determination 353-354
Prodenia eridania, glycogen in, with special reference to ingestion of glucose. Frank H. Babers 509-530
Pungency, in onion, factors affecting. Hans Platenius and J. E. Knott 371-379
Pythium spp., cause of radicle decay of conifers, experiments 92-94

Quercus spp. *See* Oaks.

Radicle decay, of conifers caused by certain fungi. Paul Lewis Fisher 87-95
Rations—
for pigs, calcium requirements 531-542
low-calcium, for pigs, effect on—
blood composition 538-540
gains and body weight 540-541
Rats, growth, effect of dry heating feed, experiments 311-312
Reducing-substance content of potato tuber, in relation to discoloration after cooking. Carl O. Clagett and W. E. Tottingham 349-358
REEVES, E. L.: Mottle Leaf, a Virus Disease of Cherries 555-572
Rhizobium meliloti—
cultures, isolation, infectiveness, and efficiency 359-360
physiologic studies with special reference to effectiveness of strains isolated in Kansas. John T. Kroulik and P. L. Gainey 359-369
Rhizoctonia sp., cause of radicle decay of conifers, experiments 91-94
Rice—
aneuploid plants, chromosome studies 385-386
Caloro—
cell size in haploid, diploid, triploid, and tetraploid plants 389-391
sterility and aberrant chromosome numbers. Jenkin W. Jones and A. E. Longley 381-399
chromosome number, basic, discussion 396
diploid plants, sterile, chromosome studies 384-385
haploid plants, chromosome studies 382-383
interspecific hybrids, description 394-395
tetraploid plants, chromosome studies 388-389
triploid plants—
chromosome studies 387-388, 395-396
origin 395, 396
varieties, sterility and aberrant chromosome number. Jenkin W. Jones and A. E. Longley 381-399
Ring necrosis of cabbage. R. H. Larson and J. C. Walker 475-491
RUMBOLD, CAROLINE T.: A Blue Stain Fungus, *Ceratostomella montium* N. Sp., and Some Yeasts Associated With Two Species of *Dendroctonus* 589-601

Salt, use in preparation of legume silages 343-344
Sap stream, of elm, distribution of spores of three fungi that induce vascular wilt diseases. W. M. Banfield 637-681
Season, influence on citrus red mite (*Paratetranychus citri*). L. L. English and G. F. Turnipseed 65-77
Serum, pregnant-mare, effect on heat and ovulation in ewes 621-625
Sexuality, of oat smuts, further studies. C. S. Holton 229-240
Silages—
barrel, preparation method 338-341
bottle, preparation method 337-338
preservation, experiments 342-346
types, preparation, method 337-341
Silicon, ineffectiveness in growth stimulation of *Phymatotrichum omnivorum*, tests 133, 154-158
Smoke-column visibility, theoretical analysis. H. D. Bruce 161-178
Smut—
buff, of oats—
hybridization studies 229-233, 237-240
nuclear behavior 233
physiologic races 230-233
fungi—
hosts, effect on hybridization, experiments 121-127
hybrids, intraspecies and interspecies, pathogenicity 122-125
sporidial fusions 237-240
Smuts, oat, further studies with special reference to hybridization, cytology, and sexuality. C. S. Holton 229-240
Sodium sulphate in soil, effect on pungency of onions 376-377
Soil types, effect on pungency of onions 375-376
Sorghum, cyanogenesis in presence of mercuric chloride, experiments 503-504
Sorghums, preservation for chemical analysis by mercuric chloride, experiments 494-507
Sphaeropsis ellisii, cause of radicle decay of conifers, experiments 91-94
Spores of three fungi inducing vascular wilt diseases of elm, distribution by sap stream. W. M. Banfield 637-681
Sporobolus—
airoides, seed, germination, factors affecting 692-694, 708, 710-711, 714
asper, seed, germination, factors affecting, study 692-694, 709, 711-712, 714
contractus, seed germination, factors affecting, study 692-694, 704-707, 711-713
cryptandrus seed, germination, factors affecting, study 692-701, 710-713
flexuosus, seed, germination, factors affecting, study 692-694, 701-704, 710-713
giganteus seed, germination, factors affecting, study 692-694, 707-708, 710-713
spp.—
dropseed grasses, germination, factors affecting. Vivian Kearns Toole 691-715
effect of sulphuric acid on germination 695-697, 701-708, 711-713
germination, effect of—
light, study 692, 694-695, 699, 701, 707, 711, 712, 713
potassium nitrate, study 692-709, 711-714
temperature, study 692, 694-714
seed, water absorption, effect on germination 709-711, 712-713
wrightii, seed germination, factors affecting, study 692-694, 709, 710-711, 714
STEINBERG, ROBERT A.: Use of *Lemna* for Nutrition Studies on Green Plants 423-430
Stereum frustulosum, isolation from butt decay of oaks 118
Sterility, rice, and aberrant chromosome numbers in Caloro and other varieties. Jenkin W. Jones and A. E. Longley 381-399
